

Kalyan Sai Raju

Senior BI & Data Engineer | Power BI | DAX | SQL | GCP | BigQuery | ETL/ELT | SSIS

Phone: +91-9292709487 Email: kalyan.sairaj@gmail.com Location: Hyderabad

Summary

- ❖ Senior BI & Data Engineer with 6.9 years of experience building production-grade dashboards, analytical data models, ETL/ELT pipelines, data marts and enterprise reporting solutions across Healthcare, Media, Telecom and Financial Services.
- ❖ Strong hands-on experience with Power BI, DAX, Power Query, SQL Server, T-SQL, SSIS, BigQuery and GCP for end-to-end analytics delivery from source ingestion to business dashboards.
- ❖ Built interactive KPI dashboards, operational reports and analytical views with drill-down/drill-through, business measures, trend analysis, reconciliation metrics and data-quality monitoring.
- ❖ Experienced in star-schema and dimensional modeling, fact/dimension design, SCD concepts, incremental loads, UPSERT processing, source-to-target validation, reconciliation and production support.
- ❖ Strong SQL expertise covering stored procedures, views, CTEs, joins, window functions, indexing, execution-plan analysis, query optimization and large-volume reporting workloads.
- ❖ Worked closely with business stakeholders, analysts, QA and engineering teams to define KPIs, translate reporting requirements into scalable technical solutions and support production releases.

IT Proficiency

Business Intelligence: Power BI, DAX, Power Query, Data Modeling, KPI Dashboards, Drill-through, Row-Level Security, Tableau, Looker Studio, SSRS.

Cloud & Data Engineering: GCP, BigQuery, Google Cloud Storage, Pub/Sub, Apache Airflow / Cloud Composer, Azure Data Factory, ETL/ELT, incremental and historical loads.

Programming & SQL: SQL, T-SQL, Stored Procedures, Views, UDFs, CTEs, Joins, Window Functions, DDL/DML, Python exposure.

Data Warehousing: Star Schema, Snowflake Schema, Fact/Dimension Tables, SCD Type 1/2, Data Marts, Reconciliation, Data Quality, Data Governance.

Tools & DevOps: SSIS, SSDT, SSMS, Visual Studio, Git, GitHub, Azure DevOps, branching, commits, pull requests and deployment support.

Professional Experience

- Senior IT Consultant - Survik Software Pvt. Ltd. (Client: Bridgetree / Asurion) | May 2026 - Sep 2026.
- Database Developer-I / BI & Data Engineer - Mirra Healthcare Services India Pvt. Ltd. | Mar 2024 - Jan 2026.
- Data Engineer / BI Developer - News Corp / News UK Tech | Jan 2022 - Mar 2024.
- Software Engineer / SQL & BI Developer - NetAmbit | Oct 2019 - Jan 2022.

Projects

Project #4

Project Title : Asurion Channels Modernization

Role : Senior IT Consultant / Senior BI & Data Engineer

Technology : Power BI, DAX, Power Query, SQL Server, SSIS, T-SQL, Snowflake, GCP, Azure DevOps, Git, Visual Studio/SSDT

Date : May 2026 to Sep 2026

Description :

Worked on enterprise channel modernization for Asurion, AT&T and Verizon, combining production ETL engineering with operational BI dashboards for SMS, Direct Mail, Email and POM delivery workflows.

RESPONSIBILITIES:

- ❖ Designed Power BI dashboards and reporting datasets to track processing volumes, queue status, success/failure counts, duplicates, invalid records, insert/update metrics and daily operational trends.
- ❖ Created DAX measures and calculated columns for KPIs such as Total Processed, Inserted, Updated, Error %, Duplicate %, Missing Configuration counts and source-vs-target reconciliation.
- ❖ Built Power BI models with relationships, filters, drill-down and reusable measures so business and support teams could analyze channel performance and exceptions.
- ❖ Developed and enhanced production SSIS pipelines for SMS, Direct Mail, Email and POM delivery processes across multiple channel databases.
- ❖ Implemented incremental-load and UPSERT processing using source deduplication, key-based lookups, null-safe change detection and conditional routing for new, changed and unchanged records.
- ❖ Built audit and monitoring frameworks capturing rows read/inserted/updated/errors, execution GUID, status, failure details and automated success/failure notifications.
- ❖ Developed complex T-SQL, CTEs and stored-procedure logic for transformation, reconciliation, duplicate detection, schema comparison and source-to-target validation.
- ❖ Performed production troubleshooting for data mismatches, schema/metadata issues, ETL failures and reporting discrepancies; supported QA validation, defect resolution and release activities.
- ❖ Used Git and Azure DevOps for feature branches, commits, pull requests and deployment coordination with QA and business stakeholders.

Project #3

Project Title : Healthcare Claims Analytics & Reporting

Role : Database Developer-I / BI & Data Engineer

Technology : Power BI, DAX, Power Query, Azure Data Factory, SQL Server, SSIS, SSRS, T-SQL, BigQuery, GCP Cloud Storage, Looker Studio

Date : Mar 2024 to Jan 2026

Description :

Built healthcare analytics and data-processing solutions using claim-level and service-line datasets for operational, finance and management reporting.

RESPONSIBILITIES:

- ❖ Designed and developed Power BI dashboards for claims volumes, paid/denied/pending status, claim amounts, approval and denial rates, monthly trends and operational KPIs.
- ❖ Created DAX measures for total claims, distinct members, paid amount, denial percentage, variance analysis, month-over-month and year-over-year comparisons.
- ❖ Built reporting-ready semantic models using star-schema concepts, relationships, calculated measures, filters, slicers and drill-through navigation.
- ❖ Developed ADF pipelines using Linked Services, Datasets, Copy Activity, Lookup, ForEach and Stored Procedure activities for scheduled and incremental data processing.
- ❖ Built and supported production SSIS pipelines for historical and incremental healthcare data loads and integrated SQL transformation logic with orchestration workflows.
- ❖ Wrote and optimized complex T-SQL stored procedures, views, CTEs, window functions and reporting extracts used by dashboards and downstream analytics.
- ❖ Performed source-to-target reconciliation, duplicate checks, missing-value analysis and business-rule validation before data was exposed to reporting users.
- ❖ Worked with 837 Professional, Institutional and Dental claims data for claim-level and service-line reporting and collaborated with business users to resolve data discrepancies.
- ❖ Supported production incidents involving ETL failures, dashboard mismatches, data-quality defects and performance issues through root-cause analysis and controlled fixes.

Project #2

Project Title : NEWS UK TECH - Subscription & Customer Analytics Platform

Role : Data Engineer / BI Developer

Technology : Power BI, DAX, GCP, BigQuery, Google Cloud Storage, Pub/Sub, Apache Airflow / Cloud Composer, SQL Server, SSIS, T-SQL

Date : Jan 2022 to Mar 2024

Description :

Supported cloud-based customer, subscription, payment and digital-interaction analytics by building curated datasets, automated pipelines and business-facing reporting layers.

RESPONSIBILITIES:

- ❖ Built analytics-ready BigQuery datasets used by Power BI and business reporting teams for subscription, customer, payment, revenue and operational analysis.
- ❖ Developed dashboard measures and KPI logic for customer activity, subscription trends, revenue metrics and recurring reporting views.
- ❖ Designed SQL-based ELT transformations for cleansing, joining, aggregating, deduplicating and preparing business datasets for BI consumption.
- ❖ Built and supported production GCP pipelines using BigQuery, Cloud Storage, Pub/Sub and Apache Airflow / Cloud Composer with dependency-based orchestration.
- ❖ Created recurring historical datasets, including approximately 13 months of reporting history, for monthly and trend-based analysis.
- ❖ Optimized BigQuery workloads using partitioning, clustering, partition filters, selective column access and query redesign to reduce scans and improve dashboard/report response times.
- ❖ Implemented data-quality checks for missing values, duplicates, formatting errors, count mismatches and source-to-target reconciliation before downstream reporting refreshes.
- ❖ Supported failed DAGs, delayed data, long-running queries and reporting discrepancies in production and worked with stakeholders on permanent fixes.
- ❖ Contributed to legacy SQL Server / SSIS to GCP modernization by translating ETL logic into scalable cloud data-processing patterns.

Project #1

Project Title : Data Warehouse for East West Bank

Role : SQL Developer / BI Developer

Technology : Power BI, DAX, SQL Server BI (SSIS/SSRS), T-SQL, Data Warehousing

Date : Oct 2019 to Jan 2022

Description :

Worked on a SQL Server-based data warehouse for credit-card customer and financial-services data, supporting historical reporting, operational dashboards and decision-support analytics.

RESPONSIBILITIES:

- ❖ Developed Power BI and SQL-based reporting solutions for customer, transaction and operational metrics, including reusable KPI measures and business reporting datasets.
- ❖ Created DAX calculations, report filters, drill-down views and trend analysis for management and operational users.
- ❖ Built fact/dimension-style warehouse structures and prepared reporting datasets through stored procedures, views and transformation queries.
- ❖ Developed and debugged T-SQL queries, stored procedures, views, user-defined functions, joins, CTEs and temporary-table logic.
- ❖ Built SSIS-based ETL, data migration and import/export processes for flat files and SQL Server sources with validation and error handling.
- ❖ Implemented source-to-target reconciliation, duplicate/NULL checks, business-rule validation and data-quality controls before warehouse and reporting loads.
- ❖ Created indexes and supported execution-plan analysis, long-running query troubleshooting and SQL performance tuning for reporting workloads.
- ❖ Worked with senior developers and business teams to understand reporting requirements, validate outputs and support production releases.

BI & Dashboard Expertise

- ❖ Power BI Desktop, Power Query, DAX, measures, calculated columns, KPI cards, slicers, filters, drill-down, drill-through, conditional formatting, time intelligence and Row-Level Security concepts.
- ❖ DAX patterns: CALCULATE, FILTER, SUM/SUMX, COUNTROWS, DISTINCTCOUNT, DIVIDE, IF, SWITCH, RELATED, ALL, DATEADD, SAMEPERIODLASTYEAR, running totals, MoM/YoY and variance analysis.
- ❖ End-to-end reporting flow: Source Systems -> ETL/ELT -> Data Warehouse/Data Mart -> Semantic Model -> DAX -> Dashboard -> Validation -> Production Monitoring.

Academic Qualifications

- ❖ Bachelor of Computer Applications (BCA) - Pursuing | KL University - Working Professional Program.
- ❖ Diploma in Mechanical Engineering from Government Polytechnic, Nalgonda - 2018.
- ❖ S.S.C from Government High School, Tekulapally - 2011.
